

Tip: Teachers can choose to lock down a test or quiz which prohibits students from navigating away from the test or using any other applications on the computer until after the test is submitted.

This is helpful if you want to ensure your students are not navigating to other websites or launching other programs on the computer while taking a test or quiz in MyMathLab for School.

NOTE: The Lockdown Browser cannot be used on Chromebooks.

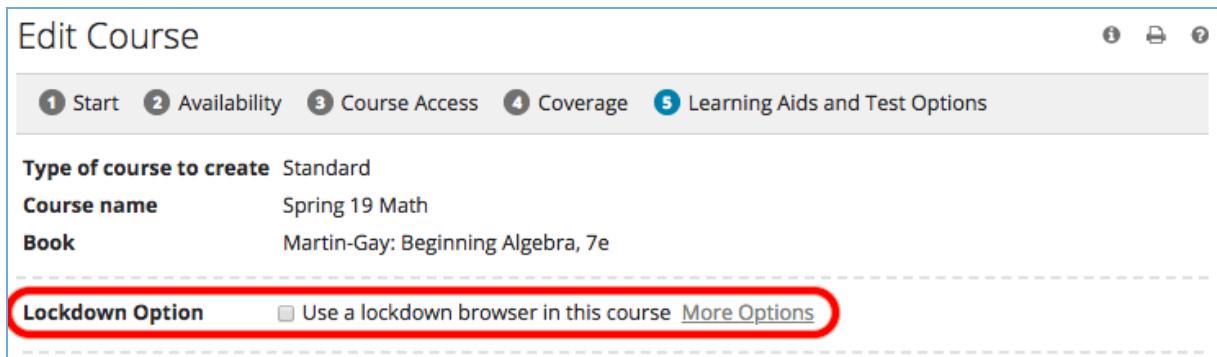

Follow the steps below to create a locked-down test.

1. Sign into your course and choose “Edit MML Settings” from the course settings menu under your course name.
2. Click “Edit” next to **Learning Aids and Test Options**.

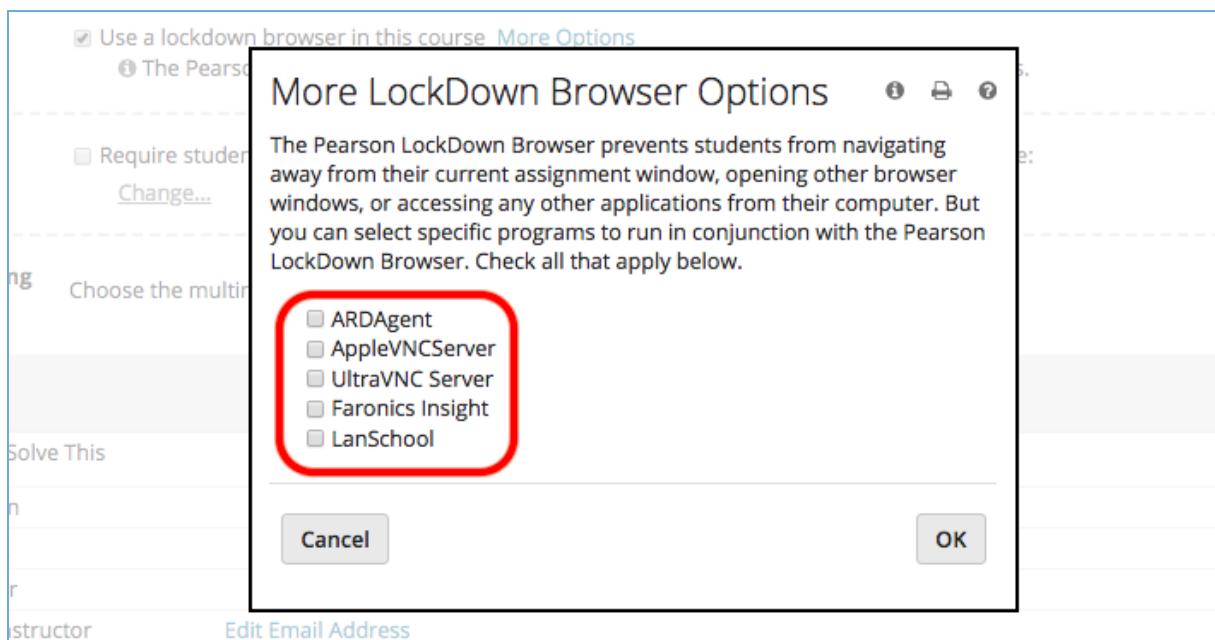

The screenshot shows the 'Learning Aids and Test Options' page. At the top right, there is a red circle around the 'Edit' button. Below it, there are several icons and labels: 'Help Me Solve This', 'View an Example', 'Video', 'Animation', 'Math Tools', and 'Glossary'.

3. Check the box for **Lockdown Option**.

The screenshot shows the 'Edit Course' page. At the top, there is a navigation bar with tabs: 1 Start, 2 Availability, 3 Course Access, 4 Coverage, and 5 Learning Aids and Test Options. The 'Learning Aids and Test Options' tab is selected. Below the tabs, there are course details: 'Type of course to create' (Standard), 'Course name' (Spring 19 Math), and 'Book' (Martin-Gay: Beginning Algebra, 7e). At the bottom, there is a section for 'Lockdown Option' with a red box around it. It contains a checkbox labeled 'Use a lockdown browser in this course' and a 'More Options' link. The 'More Options' link is also highlighted with a red box.

4. Your school may have special software installed that needs to be running in the background while the lockdown browser is in use. If this is the case at your school, you will need to make an exception for that software by clicking the **More Options** link and checking the appropriate software, if it's listed. Click **OK** to save the “whitelisted” software.

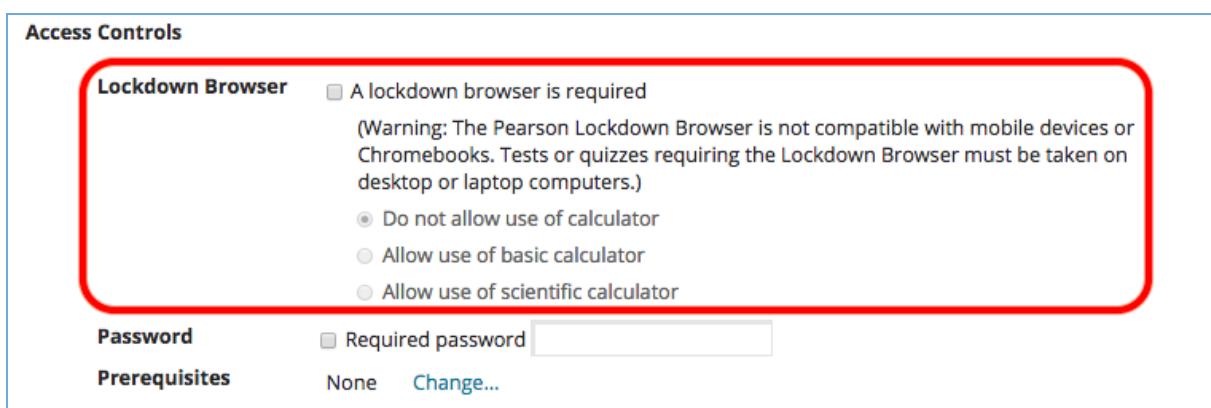

Use a lockdown browser in this course [More Options](#)

The Pearson LockDown Browser prevents students from navigating away from their current assignment window, opening other browser windows, or accessing any other applications from their computer. But you can select specific programs to run in conjunction with the Pearson LockDown Browser. Check all that apply below.

- ARDAgent
- AppleVNCServer
- UltraVNC Server
- Faronics Insight
- LanSchool

[Cancel](#) [OK](#)

5. Click “Save” on the Learning Aids and Test Options page. By selecting this setting, you now have the option of requiring the Lockdown Browser for specific tests in your course. You have not yet changed the settings for any tests in this course.
6. To set a test to use the Pearson Lockdown Browser, when creating or editing the test, go to Step 3 (Settings) and check the box “A lockdown browser is required.” Optionally, select whether students should have access to a calculator during their test.

Access Controls

Lockdown Browser A lockdown browser is required
(Warning: The Pearson Lockdown Browser is not compatible with mobile devices or Chromebooks. Tests or quizzes requiring the Lockdown Browser must be taken on desktop or laptop computers.)

Do not allow use of calculator
 Allow use of basic calculator
 Allow use of scientific calculator

Password Required password

Prerequisites None [Change...](#)

- When students launch a locked-down test, they will first be prompted to confirm that the Pearson Lockdown Browser software is installed on their computer. If it is not installed, they will be prompted to install the Pearson Lockdown Browser at that time. If already installed, the test will open.

TIP: When administering tests on school computers, we recommend that school personnel install the lockdown browser before it is needed by students. If this isn’t possible, you’ll need to make sure that students have the ability to install software on the computers they are using.
